-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 November 2000.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-3, recitation "an unformed region of the metal reflective film is formed on a portion including the injection portion in the sealing material" (claim 1), "an unformed portion of the metal reflective film is formed in the drawn electrode forming region" (claim 2), "an unformed portion of the metal reflective film is formed in a region in which the second drawn electrode and the display electrode of the other of the substrates are connected to each other on the sealing material" (claim 3) are indefinite and unclear. Because an unformed region or an unformed portion means the region or the portion is not formed. However, the claims set forth an unformed region or unformed portion is formed. Such that the unformed region with the region is formed would be a language contradiction each other.

Claims 4-5 are dependent on the claim 3. As the same explanation above, "an unformed region or unformed portions" are indefinite and unclear. Because "an unformed region of the metal reflective film is formed on a portion or are formed in the region" contains a contradiction each other.

Claim 6 is dependent on the claim 3. Therefore, claim 6 also contains such indefinite and unclear contradiction as the explanation above.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 5,893,625 (Tamatani et al).

Claims 1-3, Tamatani discloses (Figs. 5-6) that a liquid crystal display device comprising first substrate (1a) on which display electrodes (17) (the electrodes must be made of conductive material such as metal and is reflective) is formed; second substrate (1b) arranged opposite to the first substrate (1a); a sealing material (10), interposed between the pair of substrate (1a, 1b), for surrounding, together with the substrates; a liquid crystal injection space formed between the substrates; and liquid crystal sealed into the liquid crystal injection space through the injection hole (3); the liquid crystal injection hole (liquid crystal injection portion) is formed in the sealing material (10); a plurality of display electrode (16a, 16b, ..., 17a, 17b, ...) are formed on a substrate surface in a region in which the liquid crystal is sealed.

Concerning claim 1, when a metal reflective film is formed, the rest of the portion must be unformed region, and that unformed region of the metal reflective film must be

on a portion including the injection portion in the sealing material, and that would have been at least obvious.

Concerning claim 2, the draw electrodes of the display electrodes must be the electrodes terminals. Tamatani discloses (Figs. 5-6) that the electrodes terminals are formed at the edges of the substrates and outside the display electrodes forming region. When the metal reflective film is formed in the electrodes terminals forming region, the rest of the portion must be unformed portion, and that would have been at least obvious.

Concerning claim 3, the first draw electrode for a display electrode on the one of the substrates must be the pixel electrode terminal on the lower substrate; the second draw electrode for a display electrode on the other substrate must be the common electrode terminal on the upper substrate. Tamatani discloses (Figs. 5-6) that the display electrodes terminals are formed at the edge of the one of the substrates. Because the electrodes terminals are formed at the edge of the substrate would increase the display area. The second draw electrode and the display electrode of the other substrate must be the common electrode terminal and the common electrode on the upper substrate. The common electrode terminal and the common electrode must be connected to each other by an electrode connection means. The electrode connection means must be electrical conductive material such as conductive particles; conductive epoxy within the boundary, which seals the liquid crystal, i.e., the electrical conductive means is arranged on the sealing means so as to increase the display area. When the metal reflective film is formed in a region in which common electrode and the

common electrode terminal are connected on the sealing material, the rest of the portion must be unformed portion, and that would have been at least obvious.

Claims 4-5, outside the display electrode forming region and outside the display element forming region must be unformed region or unformed portions. Tamatani discloses (Figs. 5-6) when the metal reflective film such as the display electrodes (17) are formed, the outside of electrode forming region must be unformed portion and including the injection portion (3) of the sealing material and the pixel electrode terminal forming region and the common electrode terminal forming region, and that would have been at least obvious.

Claim 6, the electrode connection means consists of conductive particles added to the region constituting the sealing material was common and known in the art. Because the electrode must connect to the electrode terminal, and the connection means must be electrical conductive material such as the sealing material consists of conductive particles. The electrode connection means arranged on the sealing material would increase the display area, and that would have been at least obvious.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mike Qi whose telephone number is (703) 308-6213.

The examiner can normally be reached on 349.

Art Unit: 2871

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Sikes can be reached on (703) 308-4842. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7721 for regular communications and (703) 308-7721 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
